

EDUCATION

Computer Science: Game Design

University of California Santa Cruz

2023-2027

GPA: 4.0; Dean's List (2023 - Present)

Relevant Coursework:

GameAI
Procedural Generation
Data Structures and Algorithms
Game Systems
Foundations of Game Design
Intro to HCI
Programming Abstractions
Systems Programming in C
User Interface and User Experience Design
Computational Models

Google UX Design Professional Certificate

Relevant Coursework:

UX Research
Prototyping and Figma
Dynamic UI

Hello! I'm a Computer Science: Game Design student at UCSC with experience building interactive products and analyzing user behavior to improve engagement. I'm interested in digital communities and marketplace dynamics, with hands-on experience in rapid experimentation, analytics, and cross-functional collaboration.

WORK EXPERIENCE

Technical Game Designer / Systems Designer (AR Museum Installation)

AR Development for Coastal Climate Awareness

2024-2025

CHI Conference 2026 Published Author

- Designed and implemented the full core gameplay loop for an AR-based museum installation, integrating climate education into an immersive player experience
- Built UI, visuals, and animation pipelines using Figma + Adobe, iterating on readability and pacing for public-facing play sessions
- Analyzed player behavior and survey data to identify friction points, driving a 30% increase in user engagement through iterative product improvements
- Designed and tested gameplay loops based on user interaction data, improving onboarding clarity and retention
- Collaborated with designers, engineers, and stakeholders to deliver a user-centered interactive experience

Application Engineer Intern

Cadence

2025

- Analyzed system performance data to identify optimization opportunities, improving PPA by 24%
- Synthesized complex technical metrics into actionable insights for design and engineering teams
- Streamlined iteration workflows, reducing turnaround time while maintaining performance targets

PROJECTS

GMTK Game Jam

Shopping Shopping Shopping

2025

- Led end-to-end development of a 2D game as a solo developer, managing scope, design, and delivery under a 96-hour deadline
- Used rapid iteration and player feedback to refine UX and gameplay systems
- Built data-informed UI/UX flows to guide player behavior and progression

CalHacks - AI Research Assistant

2023

- Built an AI-driven platform to evaluate research credibility using NLP models
- Analyzed user needs and designed features to improve decision-making and trust
- Prototyped and iterated using user feedback and data insights

CLUBS

Design for America - UCSC

Founder/President

2024 - 2025

- Founded a Design for America chapter at UCSC
- Developed CTD into DFA UCSC, a club focused on bringing student projects to life with proper support, documentation, and the design process.
- Currently leading the development of an game to make exploring Santa Cruz easier, more accessible, and fun for students

SKILLS

Data & Analysis

- Data analysis
- User behavior analysis
- A/B testing
- Excel / Google Sheets
- Python

Product & Strategy

- User research
- UX/UI design
- Product iteration & prototyping
- Cross-functional collaboration

Tools

- C++, Python, JavaScript, HTML/CSS, Dart, React
- Figma, Adobe, Unity, Godot
